(Please write your Enrollment Number)

End-TermExamination (CBCS)(SUBJECTIVE TYPE)(Off-Line) Course Name:TOM, Semester: 4th (May, 2024)

Subject: Theory of Machines Time: 3 Hours

Note:Q1 is compulsory. Attempt one question each from the Units I, II, III & IV. Maximum Marks:60 Subject Code:BMA 204 (2.5*8=20)(a) Differentiate between Closed Pain and unclosed Pairs. Draw neat sketch to QI (b) Find degree of freedom for Cases: (i) A cylinder inside a cylinder & What is Grashof's Law? Explain with an example for a 4 bar mechanism having link length- 3mm, 6 mm, 9 mm, 10 mm, all connected through evolute pairs and one link is fixed. (d) Explain Logarithmic Decrement? (e) Brief about classification of CAM on the basis of surface of point in contact and motion of the follower. Differentiate between, Simple gear train, Compound gear train, reverted gear train and Epicyclical gear train. Make neat sketches to show each? (g) Explain analytical method for balancing of four (4) masses rotating in the same playe? (h) What is a Gyroscope. Where is it used? **UNIT-I** a) With a neat sketch explain working of a) scotch yoke mechanism (5+5=10) Q2 and Oldham's coupling? b) Explain 3 Centers in line theorem. a)Explain method of locating instantaneous centers in a mechanism, (5+5=10)03 having 4 links with revolute pairs. b)In a pin jointed four bar mechanism, as shown in Figure. below, AB = 300 mm, BC = CD = 360 mm, and AD = 600 mm. The angle BAD = 60° . The crank AB rotates uniformly at 100 r.p.m in clock wise direction. Locate all the instantaneous centres and find the angular velocity of the link BC. mm 003 UNIT-II a) With a neat figure, show following on a radial cam with a Q4 (10) reciprocating roller mechanism: (i) Base circle, (ii) Pitch point, (iii) Pressure angle, (iv) Prime circle, (v) Lift or stroke. Write one line about each. b) What is a cycloid? Write In points with neat sketches technique for making displacement, velocity and acceleration diagrams,

	when the follower moves with Cycloidal motion.			
Batula	Q5	A cantilever shaft 50 mm diameter and 300 mm long has a disc of mass 100 Kg at its free end. The young's modulus for the shaft material is 200 G N / m ² .	(5+5=10)	
Water Market Mar		(a) Determine the frequency of longitudinal vibration of the shaft.		
		(b) Determine Frequency of transverse vibrations of the shaft.		
		(b) Determine Trequency of transverse vibrations of the shall.		
	UNIT-III			_
	Q6	a) Explain what is meant by Interference in Gears, with a neat diagram.	(5+5=10)	ma
		b)The speed ratio of the reverted gear train as shown in figure 3 is		1 -
		to be 12. The module pitch of gears A & B is 3.125 mm and of	NI	=12
		gears C & D is 2.5 mm. Calculate the suitable number of teeth for the gears. No gear is to have less than 24 teeth?	77	
		the gears. No gear is to have less than 24 teems	****	
	Q7	Explain Kiel's construction technique with a neat figure to find	(5+5=10)	
		velocity relations for a slider crank mechanism.		
		The crank and connecting rod of a reciprocating engine are 200 mm and 700 mm respectively. The crank is rotating in clockwise		
		direction at 120 rad/s. Find with the help of Klein's construction,		
		the Velocity of the piston.		
	UNIT-IV			
	Q8	An Airplane makes a complete half circle of 50 metres radius	(5+5=10)	
	5	the rotary engine and		1
		towards left, when hying at 255 km per second the propeller of the plane has a mass of 400 kg and a radius of the propeller of the plane has a mass of 400 kg and a radius of gyration of 0.3 m. The engine rotates at 2400 r.p.m clockwise, gyration of 0.3 m. The engine rotates at 2400 r.p.m clockwise,		11
		gyration of 0.3 m. The engine rotates at 2400 tiphic couple on the when viewed from the rear. A) Find the gyroscopic couple on the when viewed from the rear. B) What will be the	Townson.	
	The same of	when viewed from the rear. A) Find the gyresday when viewed from the rear. A) Find the gyresday aircraft and explain its effect on the plane. B) What will be the aircraft and explain its effect on plane if direction of rotation of		
		aircraft and explain its effect on the plane. By gyroscopic couple and the effect on plane if direction of rotation of		
		engine is reversed?		
			n (5+5=10)	
	Q9	A shaft is supported in bearings 1.8 m apart and project the beyond bearings at each end. The shaft carries three pulleys one beyond bearings at each end. The shaft carries three pulleys one beyond bearings at the middle of its length. The mass of end	9	
		beyond bearings at each end. The shall carries the pass of end at each end and one at the middle of its length. The mass of end at each end and one at the middle of its length. The mass of end at each end and their centre of	of	
		at each end and one at the middle of its length. The state of the each end and one at the middle of its length. The state of the each end and one at the middle of its length. The state of the each end and one at the middle of its length. The state of the each end and one at the middle of its length. The state of the each end and one at the middle of its length. The state of the each end and one at the middle of its length. The state of the each end and one at the middle of its length. The state of the each end and one at the middle of its length. The state of the each end and one at the middle of its length. The state of the each end and one at the middle of its length. The state of the each end	š.	
		pulleys on left is 48 kg and on right is 20 kg and the shaft axis gravity are 15 mm and 12.5 mm respectively from the shaft axis gravity are 15 mm and 12.5 mm respectively from the shaft axis	S	
		gravity are 15 mm and 12.5 mm respectively from the gravity in the gravity are 15 mm and 12.5 mm respectively from the gravity in the gravity	е	
		45 mm from the snaπ axis. It the period	1.796.79	
		static balance, determine.		
		static balance, determine. 1. Relative angular positions of the pulleys, and 2. Dynamic forces produced on the bearings when the shall be a sh	art	
	P	2. Dynamic forces produced		
		rotates at 300 r.p.m.
