SHORT SYLLABUS

BCSE204L Design and Analysis of Algorithms (3-0-0-3)

Algorithm Design Paradigms: Greedy Techniques, Backtracking Techniques, Dynamic Programming, Backtracking and Branch & Bound Techniques – String Matching Algorithms – All paths shortest path algorithms – Network Flows – Line Segments – Convex Hull finding algorithms – Randomized Algorithms – Classification of complexity and approximation algorithms.

Course Object	ves				
1. To provide m	athematical foundations for analyzing the complexity of the algor	ithms			
2. To impart the	knowledge on various design strategies that can help in solving	the real	wor	ld	
problems effect	vely				
 To synthesiz 	e efficient algorithms in various engineering design situations				

Course Outcomes

On completion of this course, student should be able to:

l .	On completion of this course, student should be able to:					
1. Apply the mathematical tools to analyze and derive the running time of the algorithms						
2. Demonstrate the major algorithm design paradigms.						
3. Explain major graph algorithms, string matching and geometric algorithms along with their						
analysis.	analysis.					
4. Articulating Randomized Algorithms.						
5. Explain the hardness of real-world problems with respect to algorithmic efficiency and learning to						
cope with it.						
•						
Module:1	Design Paradigms: Greedy, Divide and Conquer	6 hours				
	Techniques					
Overview an	d Importance of Algorithms - Stages of algorithm development:	Describing the problem,				
	suitable technique, Design of an algorithm, Derive Time					
Correctness	Correctness of the algorithm, Illustration of Design Stages - Greedy techniques: Fractional Knapsack					
Problem, and	d Huffman coding - Divide and Conquer: Maximum Subarray,	Karatsuba faster integer				
multiplication algorithm.						
Module:2	Design Paradigms: Dynamic Programming, Backtracking	10 hours				
and Branch & Bound Techniques						
Dynamic programming: Assembly Line Scheduling, Matrix Chain Multiplication, Longest Common
