ABV-Indian Institute of Information Technology and Management, Gwalior
End-Term Examination (Session 2023-24)
Subject- Probability & Statistics (ES103)

Maximum Time: 3 Hours

Max Marks: 50

Attempt all the questions

1. (a) Three individuals A, B, and C have applied for a job at a private firm. Their chances of selection are in the ratio 1:2:4. The probabilities that A, B, and C can bring about changes to boost the company's profits are 0.8, 0.5, and 0.3, respectively. If the desired change doesn't occur, find the probability that it is due to the appointment of C.

   (4)

   (b) A random variable X has the following probability distribution.

X = x	P(X = x)
0	0
1	k
2	2k
3	2k
4	3k
5	k^2
6	$2k^2$
7	$7k^2 + k$

   1. Find k.
   2. Find the Mean.
   3. Find $P(0 < X < 5)$.

   (3)

   (c) If six dice are thrown 729 times, how many times would you expect at least three dice to show a five or six?

   (3)

2. (a) If X is a Poisson random variable such that $P(X = 2) = 9P(X = 4) + 90P(X = 6)$, find the variance of X.

   (2)

   (b) Let X be a discrete random variable (DRV) with mass points given by

   $$x_n = (-1)^n \frac{2^n}{n}, \quad \text{for } n = 1, 2, \ldots$$

   and the Probability Mass Function (PMF) defined as

   $$f(x_n) = \frac{1}{2^n}, \quad \text{for } n = 1, 2, \ldots$$

   Check whether the PMF is well-defined or not.

   (3)

3. (a) The weight of an almond is normally distributed with a mean of 0.05 ounce and a standard deviation of 0.015 ounce. Suppose a package of 100 almonds is a random sample.

(i) Find the probability that the sample mean will weigh between 0.048 and 0.053 ounce.

(ii) Find the probability that a package of 100 almonds will weigh between 4.8 and 5.3 ounce.

(3+3)

(b) The mean of a certain normal population is equal to the standard error of the mean of the samples of 64 from that distribution. Find the probability that the mean of the sample size 36 will be negative.

(4)

4. (a) In a study to determine whether a certain stimulant produces hyperactivity, 55 mice were injected with 10 micrograms of the stimulant. Afterwards, each mouse was given a hyperactivity rating score. The mean score was $\bar{x} = 14.9$ and $s = 2.8$. Give a 95% confidence interval for the population mean score μ.

(5)

(b) Mark is a shot putter. The distances, in metres, for 8 of his throws are shown below:

$$15.82, 16.07, 15.37, 19.01, 17.52, 14.98, 15.64, 16.28$$

(i) Find a 99% confidence interval for the mean distance thrown.

(ii) Mark claims that his mean throwing distance is 17 metres. Test at the 5% level of significance whether Mark's claim is justified.

(5)

(c) In a sample of 1,000 people in Maharashtra, 540 are rice eaters and the rest are wheat eaters. Can we assume that both rice and wheat are equally popular in this state at the 1% level of significance?

(5)

5. (a) Find the lines of regression from the following data:

x	2	4	6	8	10
y	6	5	4	3	2

(5)

(b) A computer while calculating the correlation coefficient between two variables X and Y from 25 pairs of observations obtained the following results:

$$n = 25, \quad \sum X = 125, \quad \sum X^2 = 650, \quad \sum Y = 100, \quad \sum Y^2 = 460, \quad \sum XY = 508$$

However, it was later discovered during checking that two pairs were copied incorrectly as:

X	Y
6	14
8	6

While the correct values should have been:

X	Y
8	12
6	8

Obtain the correct value of the correlation coefficient.

(5)
